

**IN THE CLAIMS:**

Claim 11 (Amended): A thin film transistor substrate having a wiring as claimed in

Claim 1.

**REMARKS**

All the claims examined on the merits in this application have been made subject to a species election. Six patentably distinct species are alleged, in the outstanding Official Action, embodied by the claims examined on the merits. The Official Action submits that, in the absence of generic claim found to be allowable, which currently is not the case, the claims of the present application must be limited to one of the six patentably distinct species set forth in the outstanding Official Action.

Applicants, have elected, without traverse, the embodiment depicted by Figures 1, 3 and 7A-8C which are the subject of Claims 1, 11 and 20.

In view of the withdrawal from further consideration of Claims 2-4, Claim 11 has been amended to recognize this withdrawal from consideration. The amendment of Claim 11 involves removal of the multiple dependency of that claim. As amended, Claim 11 depends solely from Claim 1, the only one of the original claims, Claims 1 to 4, from which Claim 11 originally depended, which has not been withdrawn from consideration.

Applicants submit that the present application is now in condition for examination. Prompt examination followed by Notice of Allowance and passage to issue of the claims to be

examined on the merits, Claims 1, 11 and 20, is respectfully solicited.

Respectfully submitted,

A handwritten signature in black ink, appearing to read "Marvin Bressler", with a long horizontal flourish extending to the right.
